

5000 Series Heavy Duty Air Operated Semi-Automatic L-Sealers

The 5000 Series L Sealers are heavy-duty production console sealers which have a powered automatic package take-away conveyor. With the automatic take-away conveyor, the operator can produce up to fifty percent more packages in any production period.

With the air operated unit, the arm is actuated by an air cylinder. The operator, after inserting a package in the film and moving the package to the seal area, pushes two buttons on the front of the machine starting the sealing cycle. While the next package is being inserted by the operator, the sealing arm automatically seals the package, returns to the up position, and the package is automatically conveyed to the shrink tunnel.

Electronically timed 0 to 5 seconds pressure dwell control is standard. This is a requirement when sealing polyolefin films. The 0 setting permits the sealing of PVC and polyethylene films.

Made in the USA

Air Operated

Standard Features:

- Air operated sealing arm with safety system
- Electromagnetic held sealing arm
- Positive sealing element temperature control
- Dwell control
- Adjustable sealing pads
- Power take-away conveyor
- Heavy-duty construction

Accessories:

- Film inverting head with power unwind
- Conveyor - sealer to tunnel
- Hot hole punch
- Electrical hole punch
- Pneumatic die punch
- Vacuum scrap removal (less container)

Specifications:

- **Electrical:** 220 volt, single phase, 3 wire, 10-15 amp
- **Air Requirements:** 5 CFM at 65 psi
- **Seal Area:**
 - 5224 – 20" W x 24" L
 - 5236 – 20" W x 24" L
 - 5248 – 20" W x 24" L
 - 5436 – 30" W x 36" L
 - 5448 – 30" W x 48" L

Shipping Weights:

- Model 5224 – 465 lbs
- Model 5236 – 620 lbs
- Model 5248 – 675 lbs
- Model 5436 – 695 lbs
- Model 5448 – 845 lbs

5000 Series

Heavy Duty Electromagnetic Hold Down Semi-Automatic L-Sealers

The 5000 Series L Sealers are heavy-duty production console sealers which have a powered automatic package take-away conveyor. With the automatic take-away conveyor, the operator can produce up to fifty percent more packages in any production period.

The operator, after inserting a package in the film and moving the package to the seal area, pushes two buttons on the front of the machine starting the sealing cycle. While the next package is being inserted by the operator, the sealing arm automatically seals the package, returns to the up position, and the package is automatically conveyed to the shrink tunnel. The arm is brought into the sealing position manually by the operator. This actuates the magnetic hold-down and initiates the automatic cycle to complete the package and move it automatically to the shrink tunnel.

Electronically timed 0 to 5 seconds pressure dwell control is standard. This is a requirement when sealing polyolefin films. The 0 setting permits the sealing of PVC and polyethylene films.
