Automatic Skin Packaging System ASP Series

Equipment

The ASP Series machines can be used for skin packaging a multitude of products, utilizing the most popular film and board. They are efficient for both low and high volume production, with only one operator required.

With minimum investment, along with unskilled labor, the ASP Series, in conjunction with Starview's Roller Pressure Die Cutters, can have comparable outputs to other, more complicated machines on the market.

ASP w/manual out-feed

ASP w/auto out-feed

The ASP Series machines come equipped with a PLC Control Panel with Touch-Screen Operator Interface which offers advantages to the end-user facilitating programming and operability. These machines also feature an electronic device which keeps oven at the desired temperature when machine is ON, but not running. This feature helps to speed up cycling.

Both in-feed and out-feed speeds can be adjusted for ease of operability and can also be individually turned ON or OFF as required.

All functions for set-up purposes can be independently activated. The set-up of the machine is merely completed in a matter of minutes.

Heater: Quartz Tubulars (Silica)

Structure: Heavy gauge welded steel.

Optional: Infra-red Ceramic Heater Elements

Model	ASP-2430	ASP-2436	ASP-3036	ASP-3048	
Maximum Card Size	24" x 30"	24" x 36"	30" x 36"	30" x 48"	
Maximum Product Height	6"				
Working Pressure	80 PSI				
Air Consumption CF / Cycle	1.8	2.1		2.5	
Electricals	220/3/60				
Amps	45	60	70	85	
Vacuum Turbine (100 CFM each)	2		3	4	
Dimensions	Length	116"	112"	136"	
	Width	42"		48"	
	Height	70"			
	Working Height	40"			
Approx. Weight	700 lbs	800 lbs	1000 lbs	1300 lbs	
Additional floor space required for optional out-feed system	61"	67"		79"	

Custom sizes and features are available on request.

Optional: Automatic Out-feed System, Temperature Control with Infrared Sensor
